## DETAILED ACTION

### ***Response to Arguments***

1. Applicant's arguments filed 03/05/02 have been fully considered but they are not persuasive.

In response to the Applicant's arguments, Applicant's stated "*Maturano et al.* fail to disclosed the step of at least temporary interrupting data transmission over the poorly performing wireless link". *Maturano et al.* disclosed temporary interrupting data transmission over the poorly performing wireless link until the adequate data blocks is received (col. 4/ln. 8-49).

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 21-22, and 41-42 are rejected under 35 U.S.C. 102(b) as being anticipated by *Maturano et al.* (5,636,230).

As per claims 1, 21, and 41, *Maturano et al.* disclosed a base station (fig. 1/no. 102-103, col. 2/ln. 49) being adapted for communications with one or more wireless terminals (fig. 1/no. 101, col. 2/ln. 47) over a wireless link wherein the base station

Art Unit: 2684

identify a poorly performing link and temporarily interrupting data transmission over the poorly performing wireless link (abstract, col. 2/ln. 58-col. 4/ln. 15).

As per claims 2, 22, and 42, *Marturano et al.* further disclosed monitoring one or more performance parameters related to each wireless link and comparing each monitoring performance parameters to a respective predetermined threshold (col. 3/ln. 9-19).

As per claims 3-4, 13, 23-24, 33, 43-44, and 49, *Marturano et al.* further disclosed the performance parameters related to each wireless link are based on interference on the wireless link and comprises any one or more of a S/N ratio, a user data throughput rate, a C/I ratio, a BER ratio, or a number of suspend frames (col. 3/ln. 65-col. 4/ln. 7).

As per claims 5, 25, and 45, *Marturano et al.* further disclosed an average, taken over a number of successive burst, of any one or more of the S/N ratio, the C/I ratio, the user data throughput rate, or the BER ratio (col. 4/ln. 26-33).

As per claims 6, 14, 26, 34, 46, and 50, *Marturano et al.* further disclosed suspending transmission of a data frame over the poorly performing wireless link (col. 2/ln. 58-col. 4/ln. 15, where it is clear that the block of data is dropped when it is determined that it has been inadequately received and a request to re-transmitted the block of data).

As per claims 7 and 27, *Marturano et al.* further disclosed resuming transmission of the data frame after a delay period (col. 4/ln. 8-15).

As per claims 8, 16, 28, 36, *Marturano et al.* further disclosed the delay period is of random length (col. 4/ln. 16-40, where it is clear that the delay period is of random length due to the fact that until the portion of adequate data blocks has been received prior to the re-send counter has been reached).

As per claims 9, 17, 29, 37, 47, and 51, *Marturano et al.* further disclosed maintaining a count of dropped frames (col. 4/ln. 16-49, where it is clear that the counter keeps track of inadequate (dropped) received data blocks, see explanation in claim 6).

As per claims 10, 18, 30, 38, 48, and 52, *Marturano et al.* further disclosed suspending transmission if the count of suspended frames exceeds a predetermined threshold (col. 4/ln. 50-54).

As per claims 15 and 35, *Marturano et al.* further disclosed re-transmitting the dropped frame after a delay period (col. 4/ln. 40-49).

As per claim 11 and 31, *Marturano et al.* further disclosed restarting the transmission after a delay period (col. 4/ln. 63-col. 5/ln. 12).

As per claims 12 and 32, *Marturano et al.* further disclosed the delay is of random length (col. 4/ln. 63-col. 5/ln. 12).

#### ***Allowable Subject Matter***

4. Claims 19-20, 39-40, and 53-54 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Scholefield et al. (5,752,193), Dupont (5,729,542), Marin et al. (5,936,940), Kilkki et al. (6,011,778), Behtash et al. (5,745,480), Marsan et al. (6,131,049), and Kingdon et al. (6,078,818) disclose method for controlling QOS level parameters in a radiotelephone system.
